Title of Invention: An air cleaning apparatus

---

What Is Claimed:

[Claim 1] An air cleaning apparatus which is characterized by being provided with an air circulating passage formed between an air suction inlet and an air exhaust outlet, a ventilation means in said passage for circulating contaminated air in the room from the air suction inlet to the air exhaust outlet, a heating means for heating the contaminated air sucked in from the air suction inlet, a catalyst for purifying the heated contaminated air, and a heat exchange means for carrying out heat exchange between the purified heated air and the contaminated air sucked in from said air suction inlet.
